

It's agreed, now more than ever, schools need to be more secure. Automated building attendance secures a school by allowing authorized students while alerting for exceptions. Administrators need to know who has arrived, who was late and who has left. They need attendance data from outside of the classroom to better impose attendance policies. Automated real-time building attendance equates to campus safety and administrative accountability.

Attendance Services

Building Attendance is a component of the ScholarChip Cloud.
An Integrated School Safety and School Operation Service.

ScholarChip® Large Group and Building Attendance

As they enter the building, students tap their smart ID-cards onto our wheeled attendance kiosks. Our Building and Large Group Attendance Service captures previously uncollected data, gathering real time attendance data for any location outside of a classroom. Automated alerts and messaging provide administrators with the tools they need to intervene.

Attendance Kiosk reads student smart cards.

Attendance data is safely stored and accessed from the cloud.

Features & Benefits:

- Enhances safety
- Identifies attendance patterns and supports intervention
- Helps to enforce rules and regulations
- Helps to improve aspects of a school's climate
- Integrates with all modern student information systems
- Entry speeds at 50 students per minute
- Automates tardy arrival processes
- Alerts for suspended students
- Allows administrators to message directly to students
- Confirms a student's adherence to schedule at cafeteria entry
- Secures "open campus" student egress
- Integrates with our discipline referral and behavioral intervention service
- Real time and historical reporting and graphic dashboards
- Helps to improve aspects of a school's climate
